**Subject:** RE: Gasworks - Upland Assessment Report & Next Step

Trip,

By this time you have received the transmitted EPA approved Upland Assessment Report and the data analysis. Although it appears quite it isn't! GeoEngineers and EPA's Contractor, Ecology & Environment, Inc (E&E), are discussing via telephone the next potential field event. Some of their discussion includes collecting additional soil samples by using a geoprobe rig to get a better idea of the extent of upland contamination that was identified in the Upland Assessment Report. To do this, EPA is recommending using E&E to perform the additional sampling and compensate E&E for their services and equipment under the EPA's Targeted Brownfields Assessment (TBA) Program.

While GeoEngineers and E&E's scientists are discussing the next phase of investigation, E&E crews are said to be committed to other assignments through mid-December and not available for us to collectively meet with them. So this being the case, our next meeting to collectively meet and discuss the next phase won't technically happen until the week of December 3rd at the earliest. But in the meantime, recommendations are being discussed among EPA, E&E and GeoEngineers and these recommendations will already have been discussed among EPA, E&E, and GeoEngineers and shared at our next meeting in December.
